CS STUDENT STARTER KIT

12 free resources I'd recommend to every new computer science student: what each one is for, and when to use it.

LEARN THE FUNDAMENTALS

01 CS50 cs50.harvard.edu
Harvard's free introduction to computer science. The best first course there is.
Use it for: Your first semester, or before it starts.

02 freeCodeCamp freecodecamp.org
Free interactive courses and certifications, from web development to Python.
Use it for: Learning by doing, step by step.

03 MDN Web Docs developer.mozilla.org
The reference for HTML, CSS and JavaScript, written by Mozilla.
Use it for: Looking up how something on the web works.

04 roadmap.sh roadmap.sh
Step-by-step learning paths for roles like frontend, backend and AI.
Use it for: Deciding what to learn next.

GET UNSTUCK

05 Stack Overflow stackoverflow.com
Someone has almost certainly hit your error before. Search it here first.
Use it for: Error messages and "why doesn't this work?"

06 ChatGPT chatgpt.com
Ask it to explain a concept in simpler words, or walk you through a bug.
Use it for: Understanding, not copying. Check its answers.

07 Claude Code claude.com/product/claude-code
An AI coding assistant that works inside your project from the terminal.
Use it for: Bigger projects, once you know the basics.

PRACTISE AND BUILD

08 Exercism exercism.org
Free coding exercises in dozens of languages, with optional mentor feedback.
Use it for: Sharpening problem-solving between assignments.

09 GitHub github.com
Where your code lives. Save every project here; it becomes your portfolio.
Use it for: Version control and showing recruiters your work.

10 Vercel vercel.com
Put a website online for free in minutes, straight from GitHub.
Use it for: Turning projects into live links you can share.

11 Unity Learn learn.unity.com
Free official tutorials for making 2D and 3D games.
Use it for: Starting game development the right way.

PRESENT YOUR WORK

12 Canva canva.com
Make slides, posters and social graphics quickly, no design degree needed.
Use it for: Project presentations and your portfolio visuals.

> **My one piece of advice**
> Don't try to use all twelve at once. Pick one to learn from, one to practise with, and push everything you build to GitHub.
